SUMMARY

Software Engineer with 3+ years of professional experience building full-stack enterprise and customer-facing products. At Oracle, leads a Node.js product used by **~2,000 engineers**, turning complex workflows into a usable platform and saving **~1,600 person-hours per month**. Previously co-founded and launched an AI advertising product that reached **1,000+ active users in two months**. Brings TypeScript, React, Node.js, AI integration, and end-to-end product ownership.

EXPERIENCE

Software Engineer - Oracle

San Francisco, CA | Feb 2025 - Present

- Serve as **technical lead** for a full-stack **Node.js** enterprise product: translate stakeholder pain points into requirements, set architecture and priorities, lead cross-team rollout, and mentor engineers.
- Built user-facing vulnerability intake and advisory-review workflows used by **~2,000 engineers** across Oracle; consolidated researcher reports and patch data, saving **~1,600 person-hours monthly** and supporting advisories to **1.5M+ customers**.
- Designed **LLM-agent** workflows that collect reports and attachments from internal sources, generate technical summaries and initial severity assessments, and route external, internal, and customer-reported issues through tailored paths.
- Built AI validation for patch data using historical product, component, and version records; handled renamed products and imperfect history with human review for ambiguous cases. The workflow automates validation for **~95% of cases**.
- Helped shift security releases from quarterly to monthly; separately owned a mission-critical Java application and improved its reliability through dependent-system integrations and managed database connections.
- Received **three Spotlight Awards** for high-impact delivery across the organization.

Technical Co-Founder & Chief Product Officer - GorgeousTV

Los Angeles, CA | Sep 2023 - Jan 2025

- Owned **0-to-1 product and full-stack engineering** for a customer-facing AI advertising platform; built React/TypeScript interfaces and Node.js APIs, launched contextual ads in video, and reached **1,000+ active users in two months**.
- Built **GCP Dataflow** pipelines to ingest images, create embeddings, and store them in **Pinecone**; combined vector retrieval with text filters to select contextual ad candidates.
- Used **Amazon SQS** for asynchronous video processing and Redis caching for performance-critical APIs, achieving an average API response time of **0.5 seconds**.
- Automated GCP deployments with cloud build triggers, reducing deployment time by **50%+** and improving reliability with monitoring and autoscaling.

Research Assistant - UIC Systems and Internet Security Lab

Chicago, IL | Jan 2023 - Dec 2023

- Built OCPPStorm, a language-agnostic Python black-box fuzzing platform with random, state-machine, and grammar-based modules; tested it against Java and .NET OCPP implementations.
- Discovered **six CVEs** affecting electric-vehicle charging implementations and published the first-author research at **NDSS 2024**.

Software Engineering Intern - Feedback Italia

Turin, Italy | Mar 2021 - Jul 2021

- Added **50+ automated Android UI tests** using UI Automator and Espresso, reducing manual testing from three days to under one hour.

EDUCATION

University of Illinois Chicago - M.S. Computer Science, GPA: 4.0/4.0 | Chicago, IL | Mar 2022 - Dec 2023

Polytechnic University of Turin - M.S. Computer Engineering, GPA: 110/110 | Turin, Italy | Oct 2021 - Dec 2023

Polytechnic University of Turin - B.S. Computer Engineering | Turin, Italy | Oct 2018 - Sep 2021

SKILLS

Languages & Full Stack: TypeScript, JavaScript, Python, Java, SQL, React, Node.js, REST APIs, HTML/CSS

AI & Data: LLM agents, MCP integrations, workflow validation, human review, embeddings, Pinecone vector search, GCP Dataflow

Cloud & Delivery: GCP, Kubernetes, Cloud Run, AWS (SQS), OCI, Redis, CI/CD, monitoring, autoscaling

Leadership: product ownership, technical direction, code review, mentoring, cross-functional delivery

PUBLICATION

OCPPStorm: A Comprehensive Fuzzing Tool for OCPP Implementations - First author, Network and Distributed System Security (NDSS) Symposium, Feb 2024
